Vicebite Fencing Brackets

Vicebite was developed in Australia where it has been tried, tested and trusted in all types of fencing for the last 5 years. Vicebite works well in all fencing situations – on the farm, in vineyards, with equestrian fencing and for domestic fencing. It is an easy-to-use alternative to traditional notching on the straining post. Notching out the straining post is time consuming and skilled job. Vicebite avoids the need for precise on site chainsaw work; stay post struts can be pre-cut and simply assembled in the field using a single Vicebite fencing bracket.

- Faster Fencing
- Reduces Labour Costs
- Easy to Install
- Simple and fast to install
- Strong, reliable and long lasting
- Retains post strength
- Cost Effective
- Tried, Tested and Trusted
- Build Better Straining Post Systems... Fast!!

The Vicebite Stay Bracket joins the stay to the end post and backing post. It has specially placed teeth on the front and the back of the bracket that bite into the timber when first hammered to the right point/height on the post and then once wires are tensioned will be forced further into the timber creating a vice-like effect. The bracket, when under this force, prevents the stay from sliding up or sideways off the end or backing post.

That's why we say: "Once Bitten... Won't Budge!!"

Made in Australia and constructed from 2.5mm strong galvanised steel.

To see ViceBite in action take a look at the product video on the website at www.thefenceline.co.uk/vicebite/videos

A ViceBite Fence is a Tighter Fence
